

Figure 1: Heatmap of cell type distributions across four conditions (1, 2, 3, 4). The dendrogram on the left shows hierarchical clustering of cell types. The color scale at the top indicates relative abundance from 0 (blue) to 2 (red). The cell type labels on the right are organized into groups: Hematopoietic, Endothelial, Epithelial, and various specialized cell types. The heatmap shows distinct patterns of expression for each cell type across the four conditions, with some cell types showing high expression in specific conditions (e.g., CD4+ T cells in condition 1, B cells in condition 2).
